Acute caffeine and reaction time: study characteristics

This short document exists to exercise the pypdf layout adapter: its table must be recovered with columns intact.

Table 1: Group means for simple reaction time (milliseconds).

Group	n	Mean RT	SD	95% CI
Caffeine	19	292.4	21.3	282.4 to 302.4
Placebo	20	314.7	24.8	303.2 to 326.2

Table 2: Effect sizes at 30 minutes.

Outcome	Direction	Effect	SE	95% CI
Simple RT	lower is better	-22.3	6.2	95% CI -34.4 to -10.2
Choice RT	lower is better	-14.1	5.0	95% CI -23.9 to -4.3
